

MediSource™ Desktop Reference

Comprehensive Drug Database Increases Efficiency and Reduces Medication Errors

MediSource Desktop Reference™ is part of the Cerner *Multum*® solution. Cerner *Multum* has a knowledge system that provides drug information and patient education materials. The solution prevents adverse drug events and provides drug knowledge that is unavailable elsewhere.

➔ Improve Patient Care

MediSource Desktop Reference is a comprehensive drug database and is comprised of referential drug content provided by Cerner *Multum*. Presented in an easy-to-reference format, *MediSource Desktop Reference* provides healthcare professionals with drug-related information on thousands of current drugs. It helps increase efficiency, reduce medication errors, reduce costs and improve patient care in hospitals, clinics and physician offices of any size.

➔ Desktop Access to critical information

- Detailed drug interaction information
- A list of indications for a drug in ICD-9 format
- Information on diseases that may preclude the use of a drug
- Monographs for the healthcare professional, including information on dosage, pharmacology, pharmacokinetics, indications, warnings, side effects, pregnancy, and lactation
- Patient education leaflets for consumers, available in English and Spanish, which are MedGuide compliant
- Pricing and packaging information for more than 90,000 packaged drug products
- Descriptions, images, and imprint data
- Drug dosage ranges for single administrations and daily maximums for normal patients
- Drug search by category to identify drugs that may have cross-allergenicity against the drug originally listed
- Warning labels appropriate for prescription dispensing

Key Benefits

- Reduce the variance in drug therapy through evidence-based drug information
- Increase drug order efficiencies, creating accurate and safe medication orders that reduce costs
- Provide a powerful safeguard against potential medical error with safety checks
- Improve patient care and outcomes — whether used in pharmacy, hospital, clinic or physician's office
- Deliver automatic drug updates that aid in clinical decision-making
